Flavio Li Volsi

Place and date of birth   **Borgo S. Lorenzo (FI), Italy - 4th of September, 1990**

E-mail   **hello@flaviolivolsi.com**

Phone   **+4917686089901**

Skype   **flaviolivolsi**

My GitHub

Working experience

- IsayBlog/Attualissimo   2009-2013   Front-end developer

  http://www.attualissimo.it
  http://isayblog.com
  Used technologies: PHP, MySQL, WordPress, Varnish, Nginx
  At IsayBlog, blog network, and Attualissimo, cross-thematic magazine, I was responsible for starting and maintaining the network developing the frontend part.

- letmeapp   2014-2015   Founder, full-stack developer

  http://www.letmeapp.com/
  Used technologies: Node.js, AngularJS 1, Docker, Redis
  I developed letmeapp as a platform for personality tests. The webapp reached 70 million pageviews in less than a month since its launch, which challenged me to improve my system administration skills as well as writing applications to handle dozens of thousands of users online simultaneously. I established several collaborations with clients such as Disney and Universal Pictures, using tests as a way to do native advertising. It has been active for 2 years.

- Metooo   2014   Front-end developer

  http://metooo.io
  Used technologies: JavaScript, Foundation, JsViews/JsRender
  At Metooo I was responsible for developing the frontend part of the platform using technologies as Foundation and JsViews/JsRender as client-side templating engine.

- CalciatoriBrutti   2014-2015   Full-stack developer

http://www.calciatoribrutti.com/
Used technologies: PHP, MySQL, JavaScript, Node.js, WordPress

Calciatori Brutti is a satirical football website born as a Facebook page with more than a million and an half followers. I was responsible to develop and maintain both the backend and the frontend of the website. In addition to the magazine, I built a livescore system based on user generated content with Node.JS.

- ZooCom   2014-2015   Full-stack developer

http://www.scuolazoo.com/
http://www.scuolazooviaggi.com/
http://www.linkstation.it
Used technologies: PHP, MySQL, JavaScript, Node.js, Bootstrap, AngularJS 1, WordPress

At ZooCom, as full-stack developer, I was responsible of taking care of the following tasks:
- writing efficient and maintainable code
- ideating and evaluating new software applications in autonomy
- enhancing the features of existing software
- improving the speed of the existing websites

- Tiger Facility Services   2016-current   Full-stack developer

https://www.bookatiger.com
Used technologies: JavaScript, Node.js, PostgreSQL, SASS, Webpack, React, Redux, Bulma, Bootstrap, AngularJS 1, SalesForce

At Tiger Facility Services, as full-stack web developer (mostly leaning towards frontend), I have the following responsibilities:
- implementing features and improving both backend (Node.js) and the frontend (React and AngularJS)
- integrating the right 3rd party services in the platform
- documenting the platform and the new features
- assuring that the platform is scalable beyond the needs

Favourite technologies

- JavaScript (ES5, ES6)
- Node.js
- React, Redux
- SASS
- PostgreSQL
- Git
